# Promoting Classroom Participation through Micro-Credentials Certification with Personalised Quiz Generation using LLM

Student: Teoh Xi Sheng

Supervisor: Mr. Ong Chin Ann

EduQuest is an innovative Learning Management System (LMS) designed to revolutionize classroom learning by integrating gamification and micro-credentialing. The platform aims to enhance student engagement, foster motivation, and promote active participation through digital badges, personalized quests, and progress tracking.

## **Project Objectives:**

### Engage Students Through Gamification

- · Leverage game-like elements such as levels, points, and leaderboards.
- Reward student efforts with digital badges for specific milestones.

#### **Micro-Credentials Integration**

- Recognise students' achievements with digital badges
- Enable instructors to track and import progress data from third-party tools like Wooclap.

#### Personalized Learning Experience

- Allow students to upload learning materials and generate personalised quests using Large Language Models (LLMs).
- Utilise Azure OpenAI services to dynamically create quizzes and challenges.

#### **Comprehensive Course and Quest Management**

 Facilitate seamless course creation, quest management, and performance tracking through an intuitive interface.
