

Academic Year	2022	Semester	1
Course Code	HH4025		
Course Title	History of Disease: Human Evolution, Disease and Health		
Pre-requisites	None		
No of AUs	4		
Course Aims			
<p>The aim of the course is to provide students with a general overview of the basic themes and issues in the history of diseases and medical history.</p> <p>This will be done with an emphasis on <u>global epidemic diseases</u>—such as leprosy in the 12th century, plague in the 15th century, and cholera in the 19th century—and how these have impacted human civilisations. The course will begin with an in-depth examination of why knowing disease history is important, which stretches from the archaeological evidence of our human fossil ancestors to the end of the early 20th century and the rise of current diseases in these last few decades.</p> <p>This course also focuses on the history of diseases and their evolution along with human history, beginning when certain zoonosis pathogens changed to affect human evolution. Apart from the history of diseases, the course explores how humans managed their illnesses in the past, modern medicine today, and how we seek to improve in the future. Knowing human medical history will help us know how to prepare for the future, because how we fight diseases could have unintended consequences that encourage pathogens to evolve and mutate again.</p>			
Programme Learning Objectives:			
<ol style="list-style-type: none"> 1) Collect and synthesize large quantities of historical, anthropological and archaeological evidence. 2) Develop “historical empathy” with regards to individuals and groups in the past. 3) Prepare for the future, specifically, the consequences of the overuse of drugs and emerging diseases shaped by humans throughout history 			
Intended Learning Outcomes (ILO)			
<p>By the end of this course, students would be able to:</p> <ol style="list-style-type: none"> 1) Understand the importance of research on human diseases and its evolution. 2) Compare and contrast the major historical, anthropological and archaeological approaches and theories. 3) Collect and synthesize large quantities of historical, anthropological and archaeological evidence. 4) Develop how to use historical, anthropological, archaeological and biological data, along with the testing of hypotheses to study human health issues. 5) Articulate compelling, evidence-based, and well-reasoned arguments in written and oral form. 6) Present critical thoughts when studying the history of diseases and on how we treat diseases today. 7) Demonstrate an understanding of how to appropriately acknowledge and build upon the work of others. 			

Course Content

This course explores how disease has shaped the way humans have evolved, and also how diseases have evolved to exploit humans. After considering the different techniques available to investigate health in past populations, we discuss the biological and genetic impact of disease upon natural selection. The cultural consequences of ill health will also be explored, including the social and religious interpretation of why people became ill, coping strategies by past civilizations to live with diseases significant in their societies, and attempts to heal the sick.

List of key topics taught detailed below:

1. Reasons to study health in the past and how to study health in the past
2. Disease, warfare and migration
3. Early attempts to treat disease
4. Common diseases among early and modern Austronesians in East Asia, Southeast Asia and Oceania
5. The origins of human infectious disease
6. Human parasites, allergies and evolution
7. Health in human ancestors
8. Disease in early civilizations
9. Social consequences of disease
10. The future evolution of disease

Assessment (Continuous Assessment- non examinable module):

Component	Related Programme LO or Graduate Attributes	Weighting	Team/ Individual
<p>1. Seminar Participation, Presentations and Discussion¹</p> <p>--Presentation time: 40-60 min; Q&A: 10 min</p> <p>--Presentation style: narrative</p> <p>--Each student has to submit at least 3 responses with a minimum of 100 words this semester (name file as follows: firstName_response)</p> <p>--Google sheet (Groups and members): https://docs.google.com/spreadsheets/d/19--LNAPUdSpMtVQ2eFWxaAQ9m0RyXj4HL8jDULSdruw/edit#gid=0</p>	<p>1. Communicate effectively</p> <p>2. Express their understanding and thoughts of the subjects</p>	20%	Team
<p>2. Individual Research Project Proposal² (1,000 words)</p> <p>-- Submit as a Word document (*.doc) and name file as follows: firstName_proposal</p> <p>-- Individual Research Topics (to be announced on 27 Jan via Google shared document)</p> <p>--Deadline: 20 March 2022</p>	<p>Apply knowledge of history of disease to the solution of emerging disease problems (It depends on the topic of the project).</p>	20%	Individual
<p>3. Individual Research Project Progress Presentation²</p> <p>--Presentation time:10 min; Q&A: 5 min</p>	<p>Design a project to answer a hypothesis and provide methods to achieve the aims of the project</p>	20%	Individual

<p>4. Individual Research Project- Major essay² Together with item 2, it should be 2-3,000 words -- Secondary sources are fine -- Submit as a Word document (*.doc) and name file as follows: firstName_essay) --Deadline: 30 April 2022</p>	Apply knowledge of history of disease to the solution of emerging disease problems (It depends on the topic of the project).	25%	Individual
<p>5. Video of archaeological/historical sites in Singapore -- The video will have to be uploaded on Youtube -- The rubrics will be 50% from the public's likeness and 50% from instructor's side (knowledge level of the archaeology, video quality, creativity) -- Length: 10 minutes(1 group) -- Deadline: 16 April 2022</p>	Present archaeological/historical ideas and evidence to specialist and non-specialist audiences in a variety of media.	15%	Team
Total		100%	

1. Seminar Participation, Presentations and Discussion:

- Each group will get the chance to present, chair (leading discussion) and be discussants (asking questions) in turn. This rotation will happen once over the whole semester.
- Each presentation time will be: 60 mins, followed by 30 mins for questions (Q&A).
- The presentation and discussion will be based on the readings assigned by the instructor weekly.

2. Instructor will provide a list of topics where each of you are to pick a topic and that will be your topic for the whole of the semester. No limit on the number of students who can choose a certain topic.

Course Policies and Student Responsibilities

(1) General

Students are expected to complete all assigned pre-class readings and activities, attend all seminar classes punctually, and take all scheduled assignments by due dates. Students are expected to take responsibility by following up with course notes, assignments, and course-related announcements for seminar sessions. Students are expected to participate in all seminar discussions and activities.

(2) Absenteeism

The team-based activity of this course requires students to be in class to contribute to team work. In-class activities make up a significant portion of student course grade. Absence from class without a valid reason will affect student's overall course grade. Valid reasons include falling sick supported by a medical certificate and participation in NTU's approved activities supported by an excuse letter from the relevant bodies. There will be no make-up opportunities for in-class activities. If students miss a seminar session, students must inform their team members and instructor via email (hyeh@ntu.edu.sg) prior to the start of the class.

(3) Penalties for late submission

There will be penalties for late submission of 10% per day unless there are approved medical or other certificated reasons explaining the delay. Students must ensure that the instructor is aware of these circumstances as soon as possible. Students failing to submit an assignment will be denied their credit points for this course. In exceptional circumstances extensions may be granted for individual students, but only for students who ask BEFORE the essay submission date.

(4) Plagiarism in writing research papers

It is important that all unacknowledged materials in students' essays are their own work. The University has strict rules relating to plagiarism that may result in disciplinary procedures. Remember that copying or using any part of another student's essay or written work also falls within the definition of plagiarism. Exact texts cited from other's works and placed in student's paper must be put within quotation marks. Otherwise, paraphrase. The sources of both quotations and paraphrasing have to be properly noted.

Academic Integrity

Good academic work depends on honesty and ethical behaviour. The quality of your work as a student relies on adhering to the principles of academic integrity and to the NTU Honour Code, a set of values shared by the whole university community. Truth, Trust and Justice are at the core of NTU's shared values.

As a student, it is important that you recognize your responsibilities in understanding and applying the principles of academic integrity in all the work you do at NTU. Not knowing what is involved in maintaining academic integrity does not excuse academic dishonesty. You need to actively equip yourself with strategies to avoid all forms of academic dishonesty, including plagiarism, academic fraud, collusion and cheating. If you are uncertain of the definitions of any of these terms, you should go to the [academic integrity website](#) for more information. Consult your instructor(s) if you need any clarification about the requirements of academic integrity in the course.
